

Postlab # 2
CSE 1310

A) Once you are inside the pico editor what command do you use to:
(4 Points)

1. Move cursor to beginning of line.
2. Move cursor to end of line.
3. Move cursor to next line.
4. Move cursor to previous line.
5. Move cursor forward a page of text.
6. Move cursor backward a page of text.
7. Cut (delete) the current line or marked text.
8. Uncut (paste) the text that was last deleted, at the current cursor position.

B) Assume the following directory structure:

(16 points)

```
root
|
--- ->omega
|
--- ->gamma
```

i.e. omega and gamma are sub-directory under root directory. Suppose the current directory is omega and it has these files:

List1, List2, Lista, Letter1, Letter2

1. What will
Omega>ls L*
return?
2. What will happen after you type and enter the following command?
Omega> rm List?
3. Give the command(s) to delete directory omega? (Remember omega has some files)
4. What command do you use to copy all the files starting with word Letter from **omega** directory to **gamma** directory?
5. What command do you use to rename the file named **Lista** to **List3**?
6. What command(s) do you use to move all the files from **gamma** directory to **root** directory? (Assume that current directory is omega)
7. What command do you use to create a sub-directory **beta** under **omega** directory?
8. What command(s) do you use to change directory from **omega** to **gamma**?

C) Tough question: (No points)

How do you solve question number 3 and 8 of section B using a single command?
